Construction

Conductors, resistive element and protection are applied to a 96% alumina substrate. The design and laser adjustment of the resistive element optimises the fusing performance of the resistor.

Terminations

The chips are supplied with wrap-around terminations suitable for soldering.

Solderability

The terminations have an electroplated nickel barrier and 100% matt tin finish. This ensures excellent 'leach' resistance properties and solderability.

Marking

The body protection is resistant to all normal cleaning solvents suitable for printed circuits. All resistors are individually marked with 3 digits. The first two digits are the significant figures and the third defines the number of added zeros.

Fusing Performance

Note – actual fusing characteristics depend on mounting conditions. Reference conditions are FR4 substrate with 35µm (1oz) copper, pad and track width as follows: 0603 – 1.5mm, 0805 – 1.7mm, 1206 – 2mm, 1210 – 2.9mm, 2010 – 3mm.

Packaging

FCR Resistors are supplied taped and reeled on a 7" reel as per IEC 286-3. The width of the reel is 15.4±1mm for 2010 size and 11.4±1.1mm for the smaller sizes.
